

New Petzl VERTEX helmets

With the new VERTEX, Petzl offers helmets to all workers at height that do much more than ensure that their heads are protected.

Head protection is central to the needs of professionals, and Petzl has always been dedicated to providing users with the best possible helmets. In 2019, a milestone has been reached with the new VERTEX helmets!

When you have to wear a helmet all day long on different missions, perfect comfort and head fit are essential. This is why VERTEX helmets all feature the CENTERFIT headband adjustment system for perfect centering, and the FLIP&FIT system that immediately positions the headband in a low position for a secure fit. In addition, the headband folds into the shell for easy storage and transport.

Adapting to the demands of different worksites is a daily requirement. It is why Petzl offers a wide array of accessories for VERTEX helmets: several types of eye and face shields, shield protector, name tag holder, nape protector, shell protector, headlamps, transport pouch... All these accessories are compatible with the entire range of VERTEX helmets, making them totally adaptable to different work requirements. Best of all, they are mountable and removable in a few short seconds, for example with the EASYCLIP system included with all the eye and face shields.

With the DUAL chinstrap available on all VERTEX helmets, Petzl goes a step further: the clip has two positions for two different uses, allowing the workers to modify chinstrap resistance according to the needs of each work environment: work at height (EN 12492) and on the ground (EN 397).

Easy adjustment

Easily adjust the headband by simultaneously rotating the two side adjustment wheels, even when wearing gloves.

Fit on the head

Our CENTERFIT and FLIP&FIT adjustments provide the ideal fit.

Adding accessories

In just a few seconds, equip your helmet with useful accessories for the job at hand.

Adjustable resistance

Adjust your helmet chinstrap for use at height or on the ground.

VERTEX helmets are available in seven colors, and also in a HI-VIZ version (fluorescent yellow or orange, phosphorescent clips, reflective bands on the shell), and also of course in a VENT version (with ventilation holes and sliding shutters that optimize air flow in the helmet as needed).

VERTEX®

Available: April 2019

VERTEX® HI-VIZ

Available: April 2019

VERTEX® VENT

Available: April 2019

VERTEX® VENT HI-VIZ

Available: April 2019
